# Emergency Call

DSN: 911

Cell: 295-57-1911

**What is a Tsunami?** A long, high sea wave caused by an earthquake or volcanic eruption.

**Tsunami Facts:** Tsunamis travel at an average rate of 450 miles per hour and are normally less than ten feet in height. The majority of fatalities occur when a tsunamis wave carries a large wall of debris inland making swimming or wading nearly impossible. The wall of debris carried by a tsunamis wave accounts for most fatalities. Not all underwater earthquakes produce tsunami's. It takes a very large earthquake with vertical shifts of the ocean floor to create a tsunami.

**Signs and Actions to Take:** A noticeable rise or fall in water level may be an indicator. Heed all media warnings, and move to high ground.

**Tsunami Advisory:** An event has occurred that might produce a tsunami. Hourly advising bulletins will be issued.

**Tsunami Watch:** A tsunami was or may have been generated, but is at least two hours away. Prepare for possible evacuation.

**Tsunami Warning:** A tsunami was or may have been generated. People within the warned area are strongly advised to evacuate.

## START PREPARING TODAY

Take these three simple steps to prepare —

Unit: \_\_\_\_\_

Primary EM Representative: \_\_\_\_\_ DSN: \_\_\_\_\_ - \_\_\_\_\_

Alternate EM Representative: \_\_\_\_\_ DSN: \_\_\_\_\_ - \_\_\_\_\_

Primary Unit Control Center Bldg: \_\_\_\_\_ DSN: \_\_\_\_\_ - \_\_\_\_\_

Alternate Unit Control Center Bldg: \_\_\_\_\_ DSN: \_\_\_\_\_ - \_\_\_\_\_
